AGENDA

- LMI in WIOA Local Plans
- Economic Overview
 - Local Demographics
 - Unemployment
 - Industry Growth
- Existing and Emerging In-Demand Industries and Occupations
- LMI Data Sources

Local Plans [Sec. 108 (b)]

– The local plan should include:

- An analysis of the regional economic conditions, including:
 - Existing and emerging in-demand industry sectors and occupations
 - The employment needs of employers in those industry sectors and occupations
- An analysis of the knowledge and skills needed to meet the employment needs of the employers in the region
- An analysis of the workforce in the region, including current labor force employment data, labor market trends, and the education and skill levels of the workforce in the region

LMI should also be included in:

Youth Workforce Investment [Sec. 129 (c)(2)(M)]

- Program elements including services that provide labor market information about in-demand industry sectors or occupations

Training Services [Sec. 134 (C)(3)(G)(iii)]

- Training Services should be directly linked to an in-demand industry sector or occupation in the local area

Career Services [Sec. 134 (e)(3)(A)(1)]

- (iv) Labor exchange services including:
 - (I). job search and placement assistance and career counseling including
 - (aa). information on in-demand industry sectors and occupations

Economic Overview

MOHAVE AND LA PAZ LWIA

How to use data:

- Use data to drive decision, not validate decisions
- **Use more than one source of data** – don't lock yourself into a single estimate, consider all of the available data to get the most accurate picture
- **Know the limitations of your data set** – it's easy to accidentally misuse data and draw erroneous conclusions
- **Become familiar with different data sets (or someone who is)** – there is no one place to find all the data you need

Immerse yourself in the data

Be prepared to accept surprising surprises

Existing and Emerging Demand Industries and Occupations

Methodology

- Objective:
 - To identify industries and occupations with favorable labor market traits that support long-term economic and workforce strategies
- Labor market traits include:
 - High employment and wage growth
 - Projected long-term employment growth
 - Competitive advantages in employment and wages

Existing and emerging demand industries were selected based on their overall performance in each labor market indicator category, and an overall ranking score was calculated

Methodology cont.

Labor market variables were given different weights depending on the importance of each variable when defining existing and emerging demand industry requirements

- **Existing demand industries** were identified as industries with large employment bases and above-average wages
- **Emerging demand industries** were identified as industries with small employment levels and large short-term historic employment and wage growth

Location Quotient (LQ)

- A location quotient (LQ) is measurement of a region's industrial specialization relative to a larger geographic unit (usually the nation)
- It allows a subject area's distribution of employment by industry to be compared to a base area's distribution
 - Subject Area: Arizona
 - Base Area: United States
- Allows comparison of relative employment and wage levels in the United States, states, counties, & MSAs

Location Quotient (LQ) Formula

Formula

Job Example

Percent

LQ

Location Quotient Calculated

How to interpret:

- $LQ = 1$: The industry has the same share of employment/wages as the reference area
- $LQ > 1$: The industry has a higher share of employment/wages as the reference area
- $LQ < 1$: The industry has a lower share of employment/wages as the reference area

Example: an LQ of 1.0 in mining means that the region and the nation are equally specialized in mining; while an LQ of 1.8 means that the region has a higher concentration in mining than the nation.
